SIMATS ENGINEERING
ASSESSMENT TOOL 2

COURSE NAME: CSA04 COURSE CODE: Operating Systems

COURSE OUTCOME COVERED

CO1: *Apply the concepts of Operating System types, structures, and system calls to demonstrate their functions in various computing environments.* (BL2, BL3)

QUESTIONS: 1 **Total Marks:100**

Annexure A

Concept Mapping

Code of Conduct:

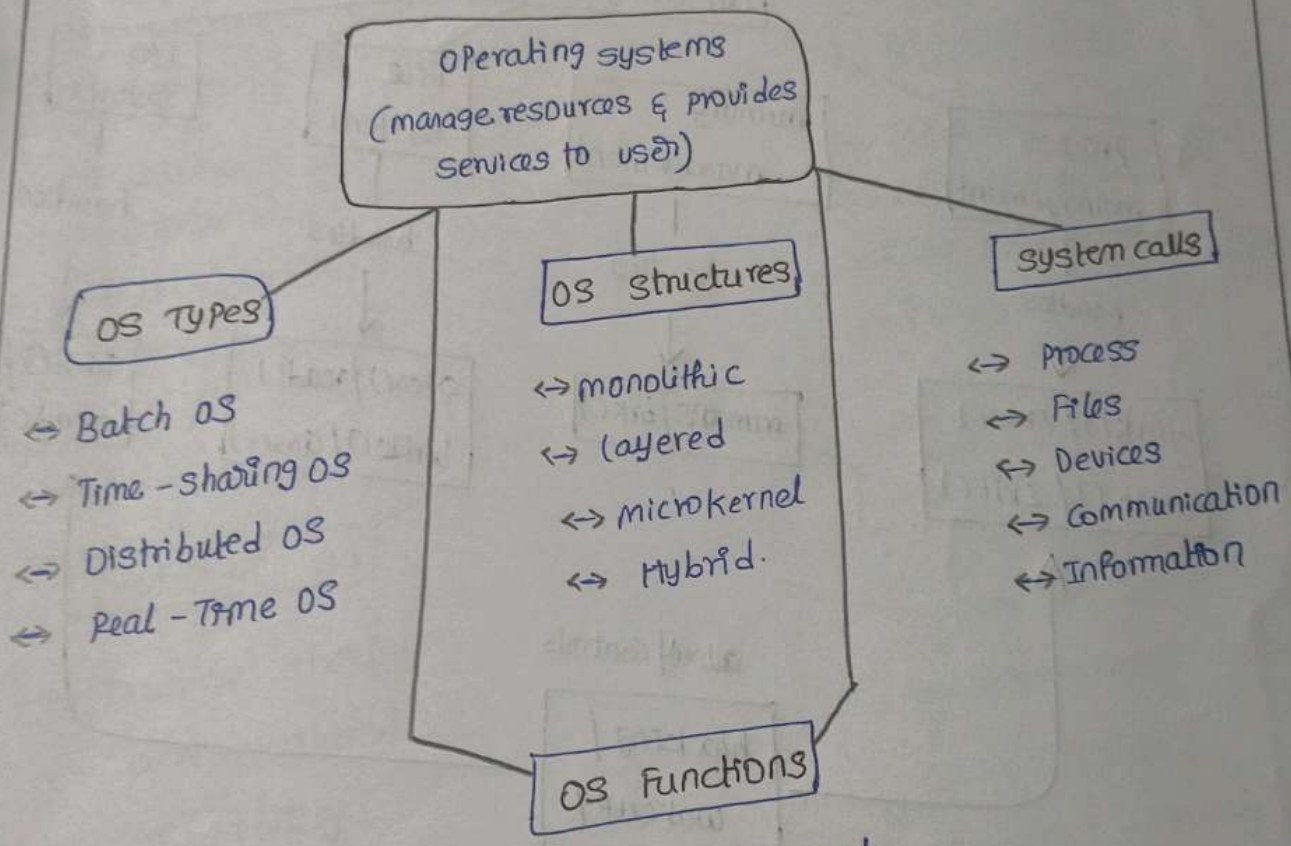

I K. Jeevan | 192525138 *(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.*
I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: K. Jeevan

How OS structure influences system call implementation

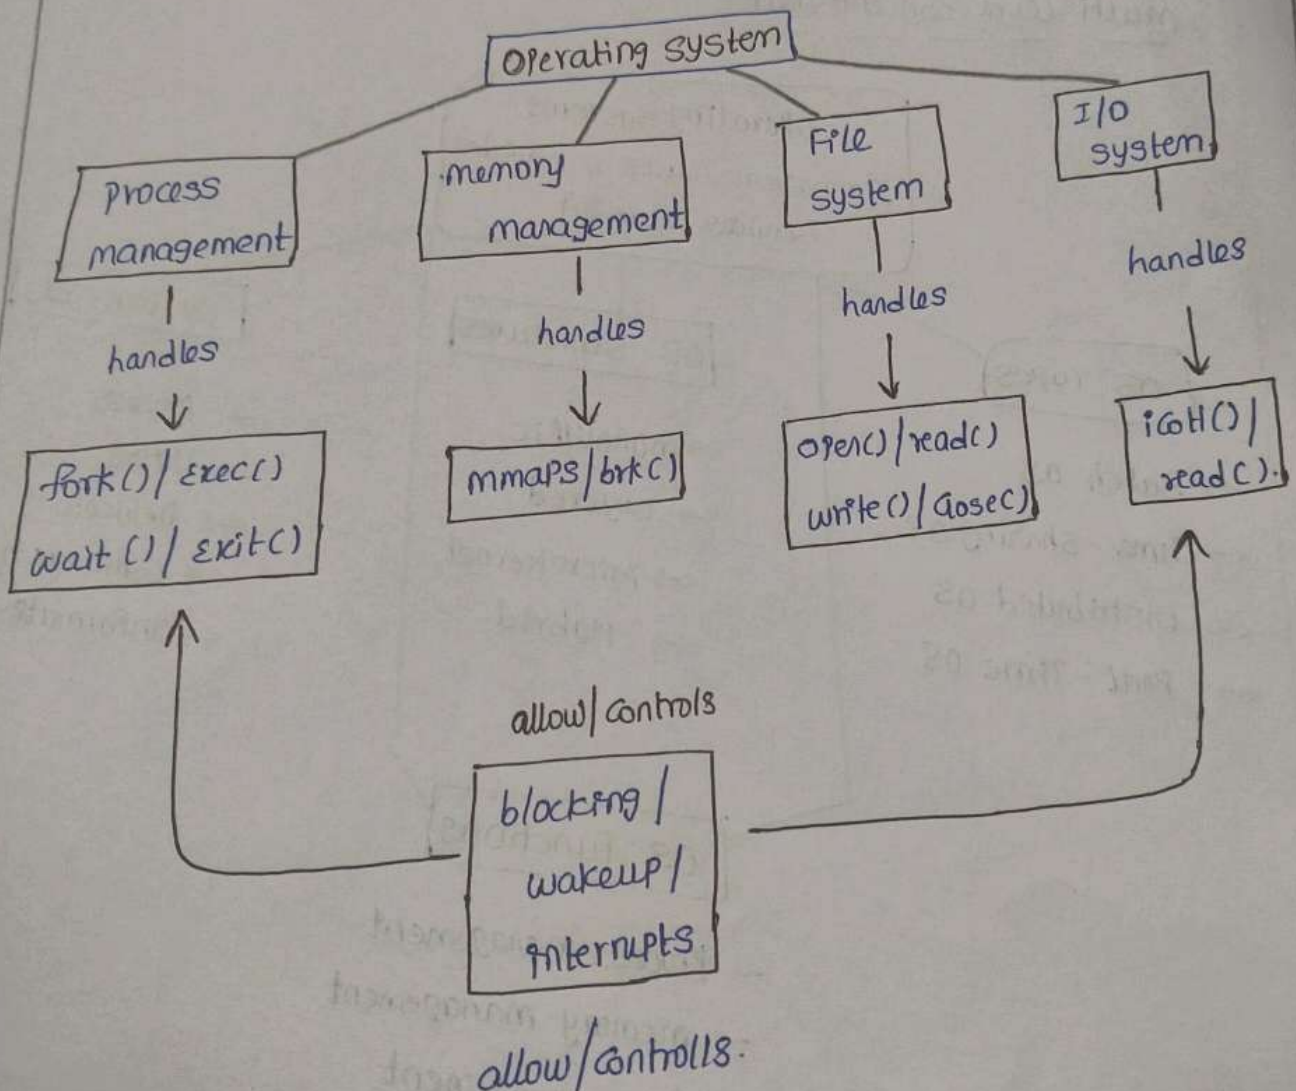

Operating system manages computer hardware and provides services to application programs. It consists of different OS types and structures. And OS functions.

Multi-Level Concept map

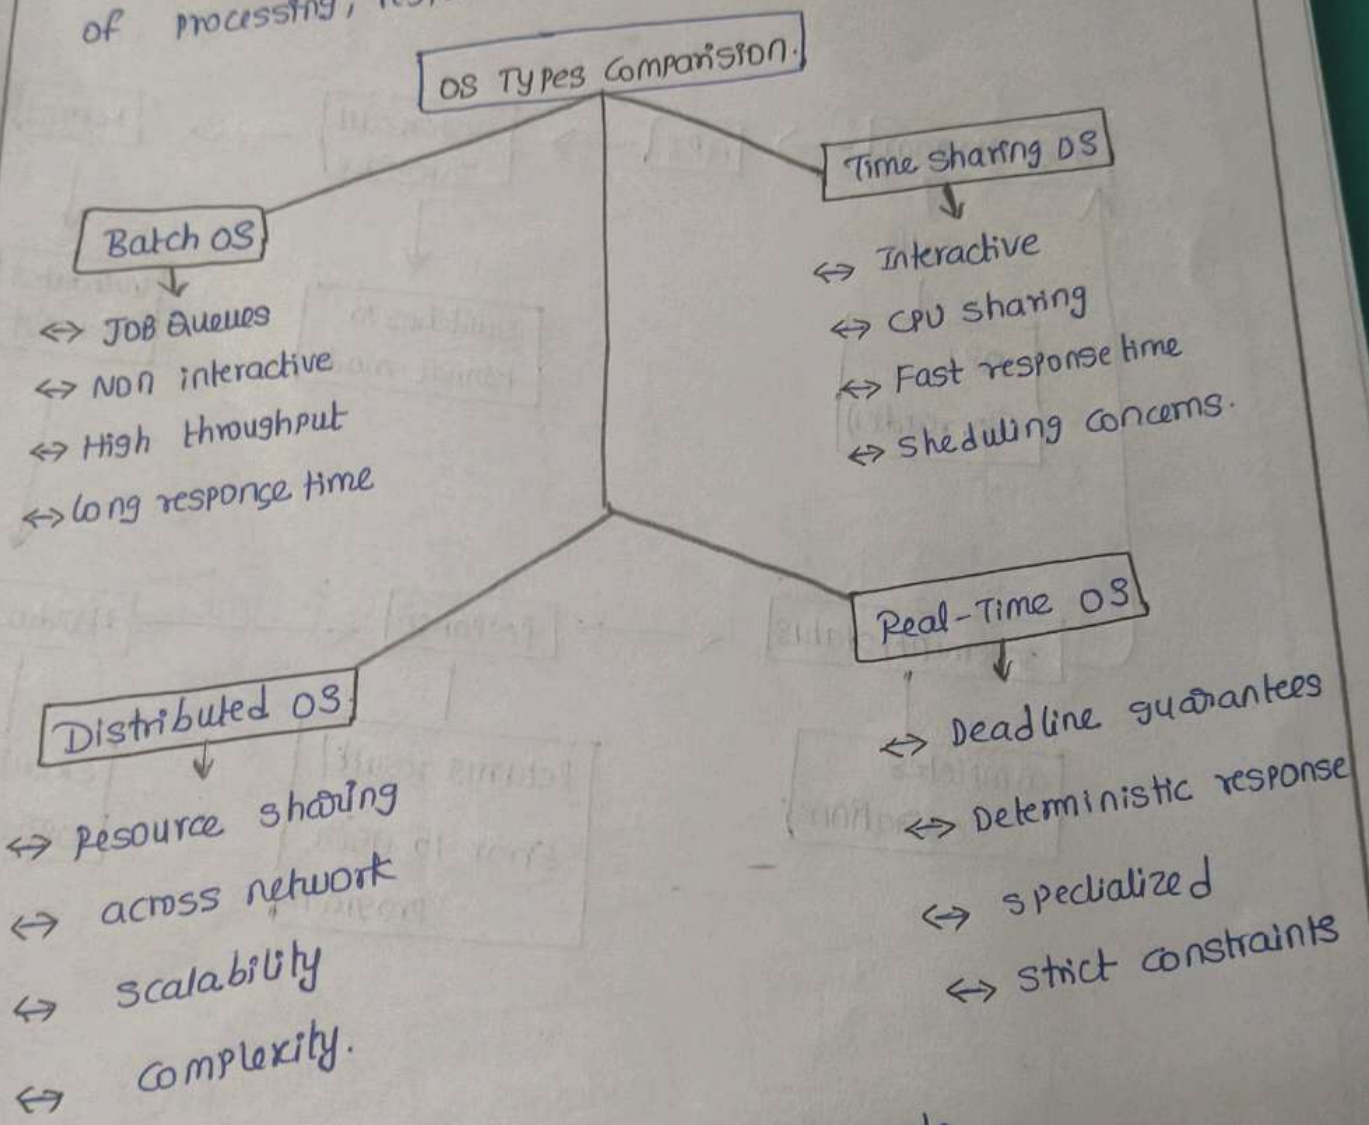

(2) where system calls interact with each component.

OS management components An operating systems manages process, memory, files and input / output devices. These components are interpedent & communicate through system calls.

Comparative concept for Types.

Types of OS can be classified as Batch, Time-sharing Distributed and Real time systems. They differ in their method of processing, response time, resource sharing.

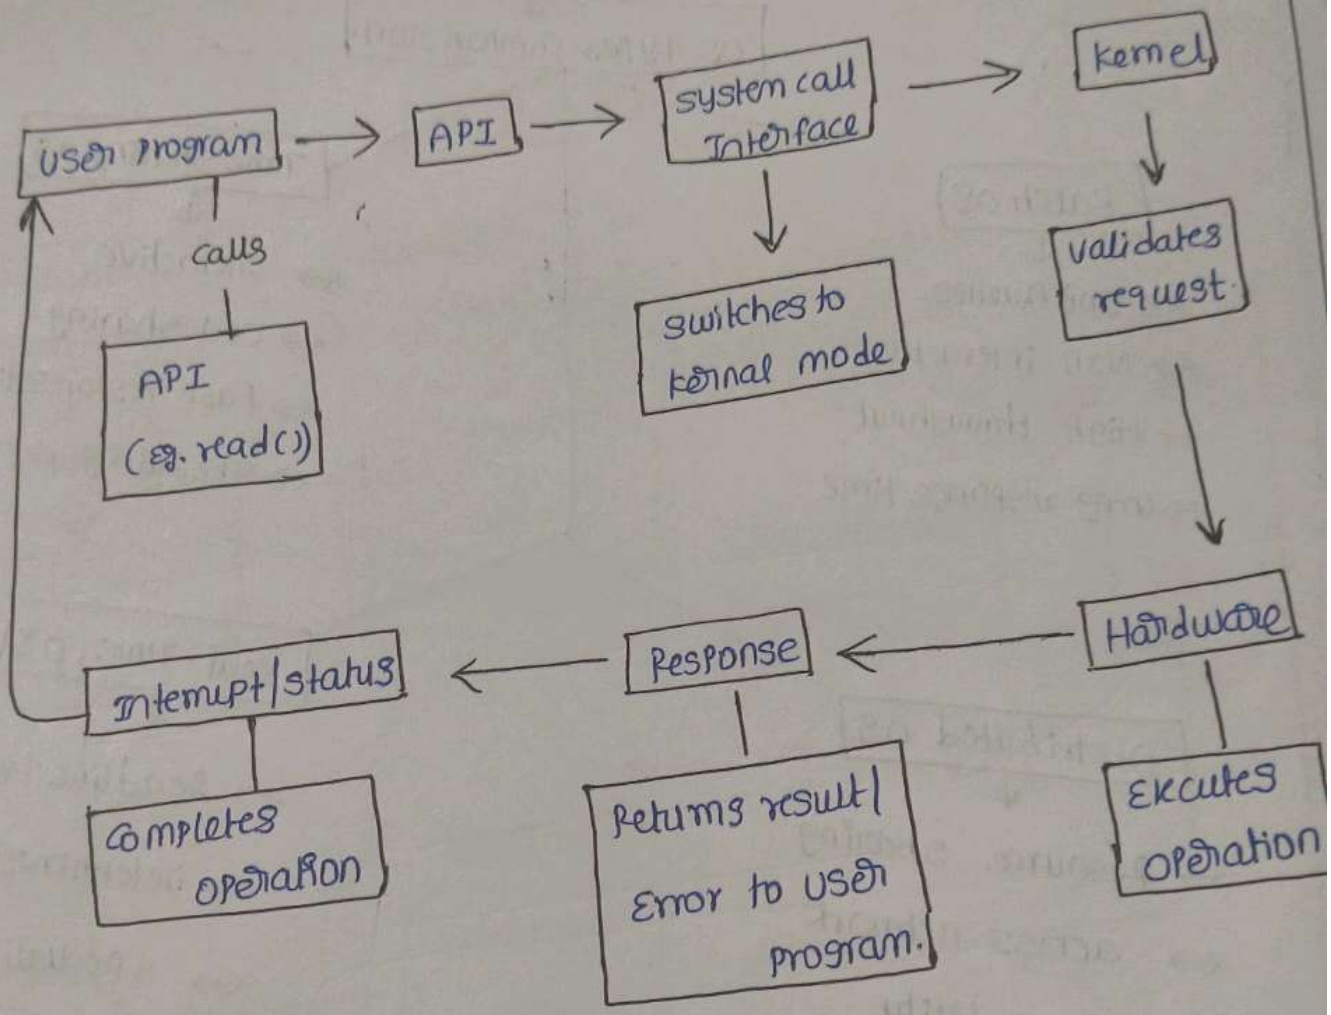

→ Similarity - CPU, memory, I/O

→ Differences - responsetime, interaction.

*

(4) feedback loops and control flow paths.

system calls Execution flow a user program requests an OS services through an API and system call Interface. The kernal processes the request & communicate.

Hierrarchical + Functional Concept map
